25X1X

1. The Cevljanovici mine is situated near the narrow (76 cm) gauge, single-track railway line connecting Sarajevo with Ivanici. The area contains a number of old workings, some of which are still being prospected.
2. During 1949 and up to the end of March 1950 the daily output of ore varied between 10 and 15 tons. Working on the average of 12.5 tons per day; and on the basis of 310 working days a year (as laid down in instructions issued by the Federal Planning Commission, FNRJ), the total annual output of ore can safely be estimated at 4,000 tons. The average mean manganese (Mn) content of the ore is 22.5 percent.
3. The entire output of ore is being dispatched by rail to the Zenica Foundry for processing.
